

Visual Alarm for Shower

When the shower is in use, a visual alarm system activates to ensure safety and awareness. This system is designed to visually indicate that the shower is active, enhancing situational awareness in industrial and hazardous environments where occupational safety standards are critical. Two options are available based on the application area:

EXPLOSION-PROOF

- **Explosion-proof:** Explosion-proof visual alarms for safe use in areas with hazardous gases or flammable substances.
- **Non-Explosion-proof:** Non-explosion-proof visual alarms, where visual and audible alarms are integrated into a single unit, for less risky environments with standard safety requirements.

This system is ideal for improving environmental safety and alerting users to potential risks.

NON-EXPLOSION-PROOF
