Mobile Chemical Spill Pallet | Wheeled Secondary Containment

Mobile Spill Pallets are engineered not only for the safe storage of hazardous liquids within the facility but also to ensure their secure transportation from one point to another.

TECHNICAL DETAILS

- **Dynamic Mobility:** Equipped with a heavy-duty wheel structure and an ergonomic push handle, it keeps the risk of leaks under control even while in motion during the transfer of drums or heavy chemical containers.
- **Leak-Proof Containment Sump:** It prevents ground contamination and the risk of occupational accidents by capturing potential spills within its own capacity. It provides regulatory-compliant secondary containment.
- **High-Strength Body:** Manufactured from material qualities resistant to chemicals and corrosion. It exhibits high durability against heavy industrial loads.
- **Safe Drainage and Cleaning:** Liquids collected in the sump can be easily monitored thanks to the grated upper platform and can be safely evacuated through the drainage mechanism.
